01 PRODUCT OVERVIEW & DEPLOYMENT TARGETS

Enterprise AI Support Triage & Automation

An intelligent operations layer designed to sit between customer channels (email, portals, Slack) and enterprise ticketing systems, turning chaotic incident queues into an automated, high-velocity resolution pipeline.

🏢 Where It Can Be Used

- **Enterprise IT Helpdesks:** Internal staff support, IAM, Okta/SSO lockouts.
- **B2B & SaaS Support:** API errors, billing disputes, webhook timeouts.
- **Managed Service Providers (MSPs):** Multi-tenant triage with SLAs.
- **Cloud & DevOps Centers:** Replica lag, database latency, pipeline errors.

⚡ Why We Need to Use It

- **Zero Triage Bottleneck:** Replaces 45-minute human backlog delays with sub-30-second automated routing.
- **Contextual AI Diagnosis:** Inspects logs, text, and attached screenshots in parallel.
- **Automated Draft Replies:** Generates customer-ready responses pre-populated with root cause and next steps.
- **Guaranteed SLA Protection:** Flags VIP and critical contracts before breach.

🎯 What Makes It Different

- **Not Just a Chatbot:** A complete triage desk with live analytics, data tables, and SLA tracking.
- **OpenAI & Local Model Agnostic:** Plug in GPT-4o, custom enterprise endpoints, or private SLMs.
- **Self-Healing Knowledge Engine:** Auto-synthesizes standard playbooks for novel 0-day incidents.

✓ Live OpenAI / LLM Integration

✓ 80% Workload Automation

✓ Multi-Modal Screenshot Analysis

✓ ServiceNow (SNOW) Ready

02 FINANCIAL ANALYSIS & UNIT ECONOMICS

How Much Does It Cost to Resolve One Ticket?

According to Gartner, HDI, and MetricNet industry benchmarks, manual IT support costs skyrocket as tickets escalate across support tiers. Friday AI slashes unit resolution costs by up to **88%**.

MANUAL L1 TIER
$22 – $28
Per ticket. 25-40 min handling time. High turnover and repetitive triage fatigue.

MANUAL L2 TIER
$65 – $85
Per ticket. Requires specialized DBA, IAM, or network engineer diagnostics.

MANUAL L3 ESCALATION
$140 – $220+
Senior engineering distraction from core product roadmap and incident bridges.

WITH FRIDAY AI
$1.80 – $3.20
AI-automated root cause, draft generation, and instant team routing in **< 30 seconds**.

RESOLUTION METRIC	LEGACY MANUAL SUPPORT	WITH FRIDAY AI AUTOMATION	NET OPERATIONAL IMPACT
Initial Triage & Routing Time	25 – 45 minutes	< 30 seconds (Real-Time API)	**98% Faster**
Mean Time to Resolution (MTTR)	4.2 hours average	18 – 35 minutes	**86% MTTR Drop**
Monthly Cost (10,000 Tickets)	$260,000 / month	$32,000 / month (80% automated)	**$228k Monthly Savings**
First Contact Resolution (FCR)	34% – 42%	78% – 84%	**2x First-Contact Wins**

03 ENTERPRISE ARCHITECTURE & SERVICENOW INTEGRATION

Seamless Integration with ServiceNow (SNOW)

Friday AI does not replace your system of record — it supercharges ServiceNow ITSM by injecting real-time AI intelligence directly into the ServiceNow Incident Management and Knowledge Management tables.

SNOW Incident Ingestion 01

Incoming ServiceNow incident created via Email / Service Portal triggers an automated Webhook / REST payload to Friday AI.

AI Triage & Diagnosis 02

Friday AI parses description, customer SLA, stack traces, and screenshots to diagnose technical root cause and specialized team.

SNOW Field Auto-Fill 03

Auto-populates ServiceNow `assignment_group`, `assigned_to`, `category`, `urgency`, and draft work notes.

Auto-KB Article Sync 04

Novel incident resolutions are packaged and pushed straight to the ServiceNow Knowledge Base (`kb_knowledge` table).

Key ServiceNow APIs & Entities Mapped:

- `/api/now/table/incident`: Bi-directional sync of incident status, priority, and SLA deadlines.
- `sys_user_group`: Automated routing to Tier 1, Database DBA, IAM, Billing, or Integrations groups.
- `sys_attachment`: Computer-vision inference over error screenshot attachments.
- `kb_knowledge`: Auto-generating standard operating playbooks directly into ServiceNow KB.

Zero Workflow Disruption:

Support agents can choose to work inside the modern, ultra-responsive **Friday AI Triage Desk** or remain entirely inside the native **ServiceNow Agent Workspace**. Every action, approval, and AI draft reflects bi-directionally in real-time.

04 OPERATIONAL IMPACT & WORKLOAD DISTRIBUTION

Performing 80% of the Work Across L1, L2 & L3

By handling repetitive classification, context gathering, and initial draft synthesis, Friday AI automates **80% of routine triage work**, allowing human engineers to focus solely on complex technical resolution.

80% Deflection

L1 Support Desk

Traditional Role: Answering phones, manual ticket sorting, copying boilerplate responses.

AI Transformation: AI auto-diagnoses the issue, pulls relevant KB articles, and crafts a customer-ready reply. L1 agents review with 1 click.

- Password resets & cert renewals: 100% automated
- Initial reply drafts: generated in 2 seconds
- Ticket ping-pong: eliminated via precise routing

Root Cause Ready

L2 Specialized Teams

Traditional Role: DBAs, IAM Specialists, and Billing Leads waste 30 minutes reproducing errors.

AI Transformation: Arrives pre-routed with root cause identified (e.g. WAL replica lag, OAuth token race) and recommended action steps.

- Pre-assigned to domain specialist (e.g. Dave Chen, Senior DBA)
- Similar precedents and runbooks pre-attached
- Direct technical investigation without triage delay

Shielded Focus

L3 Platform Engineering

Traditional Role: Senior architects pulled into triage calls for false-alarm incidents.

AI Transformation: L3 is shielded from routine tickets. Only genuine Sev-1 outages or zero-day bugs escalate, with full diagnostic logs.

- Real-time SLA breach prediction
- System-wide pattern clustering
- Frees engineering capacity for core roadmaps

05 EDGE CASES, LIMITATIONS & CONTINUOUS LEARNING

What Happens If an Issue Is Brand-New & Not in the KB?

Traditional rule-based chatbots fail completely when an issue isn't in their database. Friday AI uses **Large & Small Language Models (LLMs/SLMs)** for semantic reasoning, autonomous KB generation, and self-learning.

The Limitation of Traditional Systems:

❌ Rigid keyword matching fails if customer describes symptoms using non-standard wording.

❌ When a new bug appears (zero existing KB articles), traditional systems stall or misroute the ticket to the wrong team, causing SLA violations.

How Friday AI Overcomes This:

1. Semantic Reasoning over Error Traces: Rather than looking for exact words, the LLM analyzes stack traces, API 401/500 codes, and UI screenshots to deduce the root cause.

2. Autonomous KB Article Generation: When a novel issue is diagnosed, Friday AI clicks into action and drafts a complete **Standard Operating Playbook (SOP)** with title, symptoms, root cause, and 4-step remediation.

3. Human-in-the-Loop Safeguard: If confidence is < 75%, it automatically flags as *"Novel Incident - Human Review Needed"* and routes to senior lead.

The Self-Healing Knowledge Loop

DAY 0 — **Unseen Incident Occurs:** Customer encounters an undocumented database connection leak. No matching KB article exists.

DIAGNOSE — **AI Synthesizes Analysis:** Model inspects the follower node lag and connection counts, identifying the autovacuum lock contention.

CREATE KB — **1-Click KB Publishing:** Engineer clicks *"AI Generate KB Article"*; the system writes KB-6382 and links it permanently to the ticket.

DAY 1+ — **Instant Auto-Resolution:** Future instances of this problem are matched with 95% confidence and resolved immediately.

> **Key Takeaway:** Yesterday's unsolved mystery becomes today's auto-resolved ticket. Your knowledge base grows automatically with every incident.

06 IMPLEMENTATION ROADMAP & EXECUTIVE SUMMARY

Enterprise Rollout Plan & Expected ROI

A battle-tested 4-week onboarding roadmap from sandbox proof-of-value to full autonomous production triage integrated with ServiceNow and enterprise SSO.

Week 1: Pilot & Config W1

Deploy Friday AI container, configure OpenAI or local SLM endpoints via AI Settings modal, and connect initial queue data.

Week 2: ServiceNow Sync W2

Establish bi-directional ServiceNow REST webhook integration, mapping custom assignment groups and SLA priorities.

Week 3: L1-L2 Copilot W3

Enable agent copilot with 1-click reply draft approvals, automated ticket routing, and KB reference matching.

Week 4: 80% Automation W4

Activate auto-triage for standard high-volume categories, executive briefing generator, and self-healing KB publishing.

SLA COMPLIANCE

98.4%

Up from 74% baseline by eliminating human triage queue delays.

TRIAGE COST REDUCTION

85%

Direct labor savings by performing 80% of repetitive L1 support automatically.

KNOWLEDGE GROWTH

+45 SOPs

New standard operating playbooks synthesized autonomously per month.

Friday AI Support Platform • Enterprise Ready • Tested with OpenAI & TCS GenAI Lab Gateways

88% Lower Cost Per Ticket vs. Manual Support

Resolution Metric	Legacy Manual Tiers	With Friday AI	Net Impact
Cost Per Resolved Ticket	$25 (L1) to $180+ (L3)	**$1.80 – $3.20 / ticket**	**88% Unit Cost Drop**
Initial Triage & Routing	25 – 45 minutes	**< 30 seconds (Live API)**	**98% Faster Triage**
Mean Time to Resolution (MTTR)	4.2 hours average	**18 – 35 minutes**	**86% MTTR Reduction**
Monthly Spend (10,000 Tickets)	$260,000 / month	**$32,000 / month**	**$228k Monthly Savings**

08 AZURE CLOUD INFRASTRUCTURE & LLM FLOW

Azure Production Deployment & Service Integration

Production architecture for Friday AI: secure ServiceNow entry, Next.js triage orchestration, multimodal AI inference, and retrieval-augmented knowledge grounding.

01 · SECURE ENTRY
Azure Front Door + Entra ID
Protects application access, ServiceNow webhooks, and support-agent SSO.

→

02 · APPLICATION
Azure Container Apps
Hosts the Next.js triage desk: `triage-app.tsx` and `/api/ai/route.ts`.

→

03 · MODEL GATEWAY
Azure OpenAI + AI Foundry
GPT-4o Vision and SLM routing through `ai-models.ts`.

↔

04 · KNOWLEDGE LAYER
AI Search + Cosmos DB
Vector knowledge retrieval for `kb-references.tsx`; secrets via Key Vault.

Retrieval-Augmented Generation (RAG) & request lifecycle

Knowledge sources
KB articles, documents, incident history

→

Chunk + embed
Embedding model creates vectors

→

Vector index
AI Search + Cosmos DB references

- ServiceNow incident or agent query enters the secured application.
- The API prepares text and screenshot context, then retrieves relevant KB content.
- The model receives the prompt plus retrieved context and generates diagnosis, routing, and a response draft.
- Friday AI returns the result to the triage desk and synchronizes the relevant ticket updates with ServiceNow.

Azure services & application responsibilities

Front Door + Entra ID
Secure ingress, identity, and agent sign-in.

Container Apps / Next.js
Hosts the triage UI and AI API route.

Azure OpenAI / AI Foundry
GPT-4o Vision and SLM model gateway.

AI Search + Cosmos DB
Vector-backed retrieval and KB references.

Azure Key Vault
Secure storage for application secrets and credentials.

ServiceNow ITSM
Webhook intake and ticket/knowledge workflow integration.

End-to-end outcome: secured ticket intake → context retrieval → AI diagnosis → team routing and response draft → ServiceNow update.
